

A Fiddle Leaf Fig plant with large, rounded, light green leaves is shown in a white, ribbed pot. The pot sits on a wooden stand with four legs. The background is a dark blue wall with a white window frame on the left.

**LIGHT:** Bright, indirect light. Rotate your plant once a month so that it grows evenly. Keep away from cold drafts as it is a tropical plant.

**SOIL:** Keep it well-drained. If the pot doesn't have a drain hole, place rocks at the bottom of the pot before you put the soil in. This will help with drainage, keeping root rot at bay.

**WATER:** Water when the top inch of the soil becomes dry. Using a plant moisture meter makes things easier.

**FERTILIZE:** Fertilize during Spring and Summer months only. A general purpose houseplant fertilizer works fine.

**TOXICITY:** This plant is toxic to pets and humans when ingested.
